

# Slurp Laboratories Formulation Chemist

Slurp Laboratories is DTC beauty brand focused on developing intuitive skincare formulas for the public.

We are seeking a Formulation Chemist to develop timeless, high performing skincare formulas for a global audience. Teaming up with Slurp Laboratories' Research Scientist, you will work interdependently with external manufacturers in South Korea to develop and refine formulas against formula brief. You have a deep understanding of skincare formulas both from a chemist and consumer perspective, and use that understanding to bring fresh ideas to the table with perceivable consumer benefits. We're looking for talent that is obsessed with skincare formulation and possess a strong desire to produce visibly transformative formulas . You have a deep respect for the intelligence of consumers and a passion to explore and innovate with new raw materials, processing techniques and/or formulations in creative, nonconventional approaches while leveraging current consumer insights and needs.

Slurp Laboratories is an ideas-first collaborative, entrepreneurial company - you will contribute ideas during the conception stages of new product offering developments; ultimately enhancing the possibilities of formula ambitions and upon consensual product direction, lead the formulation process from start to finish.

Your responsibilities may include the following:

- Manage multiple projects and priorities with varying complexity at a given time
- Work closely with designated vendors and external manufacturers to get the information necessary to build strong foundations for formula frameworks and entries
- Inspect the quality, conformity and evaluation of formulations at all stages
- Propose creative and resourceful solutions to issues that arise with product development
- Independently provide information, project updates and product information to internal and external personnel to propel formulation progress or changes
- Maintain awareness of the beauty market, consumer needs, and marketing trends to help teams in generating new ideas
- Manage daily operations, SOPs, and support related formulation projects

Starting salary: 4,000,000 / month
